YOUVRAJ SINGH

Software Developer · Python, LLM integration, data validation

Bengaluru, India · +91 78699 05752 · youv2002@gmail.com · Portfolio · LinkedIn · GitHub · LeetCode

SUMMARY

Computer Science graduate who builds data-heavy systems in Python and TypeScript and proves every number against its source: three production apps shipped as a sole developer, backed by 1,300+ automated tests. I have shipped LLM features with the Gemini API, work daily with Claude Code, and want to bring that attention to detail to LLM and RAG solutions built on engineering documentation.

SKILLS

Programming Languages	Python, TypeScript, JavaScript (ES6+), SQL, Java
AI/ML & LLM	Gemini API, Vercel AI SDK (LLM content generation), Claude Code, Cursor, GitHub Copilot
Frameworks & Libraries	FastAPI, Pydantic, pytest, React, Next.js, Node.js, Express, NestJS, Zod, Playwright, Vitest, axe-core
Databases	PostgreSQL, MongoDB, Supabase, Drizzle ORM, Mongoose; schema design, data reconciliation
Developer Tools & Cloud	Git, GitHub Actions, Docker, AWS (S3), Vercel, Render, Swagger/OpenAPI, Postman, Figma, Power BI
Interests	LLMs and RAG for technical documentation: turning datasheets, specs and drawings into verifiable data

EXPERIENCE

Full-Stack Developer Intern · SKOPE Kitchens — Bengaluru · Oct 2026 – Present

- Built and launched **three production web apps** from scratch as the sole developer at a multi-brand cloud kitchen, gathering requirements directly from the CEO and operations team.
- Engineered an inventory and food-cost platform in **Python (FastAPI)** and MongoDB on an immutable stock ledger, from procurement to daily closing, modelling multi-level recipes (raw materials → semi-finished items → dishes) in the same way as a **bill of materials**.
- **Validated output against source data:** reconciled a month of real POS sales with an exact match, and wrote a 464-check Playwright suite that verifies exact ledger quantities after every step of the business flow, for each of 6 user roles on desktop and phone.
- Delivered an HR, attendance and payroll portal (Next.js, TypeScript, PostgreSQL) used daily by **50+ staff**, replacing a manual WhatsApp process; its payroll engine **matched finance records to the paisa**.
- Prototyped a multi-stop delivery platform (Next.js, PostgreSQL) with booking, order tracking with rider photo updates and a dispatch desk, passing WCAG 2.2 AA checks with zero violations; presented it directly to the CEO.
- Shipped all three with **1,300+ automated tests** (pytest, Playwright, Vitest), role-based access for up to 6 roles, JWT and session auth, rate limiting, audit logs and encrypted GitHub Actions backups.

Software Development Intern · HASVIK Technologies — Remote · Jun 2026 – Oct 2026

- Read client business requirement documents (BRDs) and turned them into Figma designs the client approved before development began.
- Built REST APIs in NestJS for a **CRM migration**, documented and tested them with Swagger, and restructured PostgreSQL schemas for data consistency.
- Converted designs into responsive Next.js components and refactored client code, **cutting page load time by 25%**; co-managed AWS deployments under senior code review.

PROJECTS

Instantly · AI-assisted e-commerce platform · Live — *React 19, TypeScript, Node.js, MongoDB, Gemini API, Stripe, AWS S3*

- Integrated the **Gemini API** through the Vercel AI SDK so admins can rewrite product titles and generate descriptions; the model can be swapped by changing one string.
- Architected the store with Zustand and TanStack Query, cutting client render time by 25%, and integrated Stripe Checkout with signature-verified webhooks for card and cash-on-delivery orders (<400 ms checkout).
- Designed MongoDB schemas that improved server response time by ~30%, and secured user and admin panels with RBAC (Passport.js, JWT in HttpOnly cookies).

AI-assisted developer portfolio · youvraj-singh.vercel.app — *Claude Code, Next.js 16, TypeScript, three.js, Keystatic, Playwright*

- Directed **Claude Code** as an AI coding agent to build a Next.js site with a scroll-driven WebGL scene and a Git-backed CMS: wrote the requirements, reviewed its output and steered the fixes.
- Verified the AI-built result rather than trusting it: 142 automated tests (86 unit, 56 end-to-end), zero accessibility violations (WCAG 2.2 AA) and Lighthouse 99–100 on desktop.

CarRental · car rental platform · Live — *React, Node.js, Express, MongoDB, JWT, ImageKit*

- Developed 14+ REST endpoints for listings, bookings and availability, with date-range validation that blocks overlapping bookings and separate JWT-secured access for users and owners.
- Built an owner dashboard for cars, bookings and revenue, with ImageKit auto-compressing vehicle images to WebP.

QuickStay · hotel booking platform · Live — *React, Node.js, MongoDB, Clerk, Cloudinary, Nodemailer*

- Engineered a hotel booking platform with Clerk authentication, Cloudinary media uploads and automated confirmation emails via Nodemailer.
- Built a real-time admin dashboard for room inventory and bookings that cut manual overhead by ~20%.

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science · St. Aloysius College, Jabalpur (Rani Durgavati Vishwavidyalaya) — 2020 – 2023

Workato Foundations | Full Stack Development Bootcamp (Udemy) | Solana Bootcamp (Rise In)
